

## device description:

use for small gardens, Suitable for spraying long-standing base trees such as Pear, Apricot, Pistachio  
Prevention of product bruising, Easy and cheap service and maintenance, Reduce spray costs considerably  
Used by one user.

lance engine sprayers for easy operation and increased efficiency of spraying operations It is designed and engineered to provide the engine with the necessary power to provide pressure in the poison fluid and spray it  
Motor sprayers can be sprayed in about 2 to 3 hectares per day in good conditions.

In this type of sprayer, the quality of spraying is also better because of very fine droplets and the dripping of poison fluid from the leaves is prevented  
Today, the use of these types of sprayers has been welcomed due to light weight, energy dissipation and product degradation compared to sprayers on the back of the tractor. Which results in improved spray quality. Other features of this device include:
